

Brentam Blockbusters

Software Development
Lifecycle

Phase 1: Understanding Requirements

Requirements Report

Design Brief

FUNCTIONAL REQUIREMENTS:

User Accounts and Authentication

- Visitors will be able to create a Ripened Raspberries account with a unique username, password and email address. The system will validate that the username is not taken.
- Registered users will be able to log in using their username/email and their password.
- Users will be able to log out.
- Users will be allowed to change their password, and provide a way to reset a forgotten password.

Movie Browsing

- Visitors will not need to be logged in to browse movies and view reviews.
- There will be a home page listing movies in sections, for example:
 - Featured films
 - Popular films
 - Recently viewed films
 - Genre categories (comedy, action, sci-fi, non-fiction, etc.)
- Clicking on a movie leads to a movie detail page listing:
 - Movie title
 - Basic information (poster, genre, year, movie length, a brief description of the movie)
 - Average rating (calculated from user reviews)
 - A list of user reviews for that movie.
- There will also be a search bar to search for movies.

Reviews

- Users will need to be logged in to post a review.
- The review form will collect:
 - Review title
 - Review text
 - Rating from 1-5 raspberries
- Logged in users will be allowed to edit or delete their own reviews
- Admins can remove inappropriate reviews and add or edit movie entries

Data Storage

- The system will store user accounts, movies and reviews in an SQLite database
- Support CRUD operations for user accounts, movies and reviews

NON-FUNCTIONAL REQUIREMENTS:

Ripened Raspberries must employ efficient sorting algorithms when filtering productions by their various characteristics. It must use carefully designed data queries to ensure that production entries appear on-screen quickly and can handle querying entries with multiple characteristics applied to movie searches. Additionally, production reviews forms should provide clear instructions on how to be filled out so as to help the user contribute to the useful production database that is Ripened Raspberries.

Goals and Objectives

With Ripened Raspberries, Brentam Blockbusters aims to curate the freshest “picks” of productions from both the Movie and TV industry, for users to seamlessly choose from. It aims to offer a variety of characteristics by which movies can be sorted, to streamline the process of selecting the most appropriate pick for the user, e.g. age ratings, genre, etc. Additionally, Ripened Raspberries seeks to provide ample information on a variety of productions for its users to aid in selecting the right preference through leaving reviews. This process is enhanced for not just users, but administrators as they are given the opportunity to log in and control what is curated to align data with professional entertainment standards and advice.

Target Audience

Brentam Blockbusters aims Ripened Raspberries at people of all ages as we serve a wide variety of ratings and genres, though teenage years are a more rigid upper end for the fantastical and humorous themes that often appear throughout. Entertainment is becoming increasingly abundant for children and so it is important to offer solutions that filter through the “farm” based on their personal preferences and bring to them suggestions that create lasting impressions when enjoyed.

End-User License Agreement

****END-USER LICENSE AGREEMENT (EULA)****

****Ripened Raspberries****

****Brentam Blockbusters****

****IMPORTANT - READ CAREFULLY:**** This End-User License Agreement (“EULA”) is a legal agreement between you (an individual or a single entity) and Brentam Blockbusters (“Licensor”) for the Ripened Raspberries software, including any associated

media, printed materials, and “online” or electronic documentation (“Software”);). By installing, copying, or otherwise using the Software, you agree to be bound by the terms of this EULA. If you do not agree to the terms of this EULA, do not install or use the Software.

****1. Grant of License.****

Licensor grants you a non-exclusive, non-transferable, limited license to install and use one copy of the Software on a single computer for personal, non-commercial, educational, and development purposes.

****2. Ownership.****

The Software is owned by the Licensor and is protected by copyright laws and international treaty provisions. The Licensor retains all rights, title, and interest in and to the Software, including all copyrights, trademarks, trade secrets, and other intellectual property rights. You acknowledge that you obtain no ownership interest in the Software through your use of it.

****3. Restrictions.****

You may not:

- * a. Modify, translate, reverse engineer, decompile, or disassemble the Software.
- * b. Create derivative works based on the Software.
- * c. Rent, lease, lend, sell, redistribute, or sublicense the Software.
- * d. Remove or alter any copyright notices or other proprietary markings on the Software.
- * e. Use the Software for any commercial purposes, including but not limited to selling the game, using it for commercial demonstrations, or charging for access to it, without express written permission from the Licensor.
- * f. Distribute or publish the Software on any platform or website without explicit permission from the Licensor.

****4. Educational and Development Use.****

This license is specifically granted for educational and development purposes. You may use the Software to learn game development, create portfolio pieces, and demonstrate your skills.

****5. Termination.****

This EULA is effective until terminated. Licensor may terminate this EULA if you fail to comply with any term or condition of this EULA. Upon termination, you must destroy all copies of the Software.

****6. Disclaimer of Warranty.****

THE SOFTWARE IS PROVIDED "AS IS"; WITHOUT WARRANTY OF ANY KIND. LICENSOR DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON INFRINGEMENT. THE ENTIRE RISK ARISING OUT OF USE OR PERFORMANCE OF THE SOFTWARE REMAINS WITH YOU.

****7. Limitation of Liability.****

IN NO EVENT SHALL THE LICENSOR BE LIABLE FOR ANY DAMAGES WHATSOEVER (INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOSS OF BUSINESS PROFITS, BUSINESS INTERRUPTION, LOSS OF BUSINESS INFORMATION, OR ANY OTHER PECUNIARY LOSS) ARISING OUT OF THE USE OR INABILITY TO USE THE SOFTWARE, EVEN IF LICENSOR HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

****8. Governing Law.****

This EULA shall be governed by and construed in accordance with the laws of Australia, without regard to its conflict of law principles.

****9. Entire Agreement.****

This EULA constitutes the entire agreement between you and the Licensor with respect to the Software and supersedes all prior or contemporaneous communications and proposals, whether oral or written, between you and the Licensor with respect to the Software.

****10. Contact Information.****

If you have any questions about this EULA, please contact:

ripenedraspberries.com.au/contactus

****By installing or using the Software, you acknowledge that you have read, understood, and agree to be bound by the terms and conditions of this EULA.****

Phase 2: Project Analysis

Project Constraints

The time constraints of this project are projected to be light as, according to the GANNT chart, Brentam Blockbusters has planned to initiate the development phase a week before the recommended start in Week 6 of Term 4. However, this largely depends on the implementation of our features, many of which we have already planned. This is mainly a concern because all three members of the company lack experience with JavaScript, and especially the development of Progressive Web Apps (PWAs). Moreover, the complexity of the task is problematic—it requires the fusion of several different concepts—webpage development, databases and object-oriented programming—into one. Researching the development of such niche functionality will be difficult and much time and effort will need to be invested.

Feasibility Study

Technical feasibility

As Ripened Raspberries will be a PWA hosted online on browsers used worldwide, it will be able to run crossplatform. However, while it is being developed with a focus on Windows and general mobile devices, certain accessibility and design differences (e.g. emojis and varying appearances of browser-provided user controls) will need to be taken into consideration when attempting to maintain a consistent platform. As PWAs are designed to run offline, an internet connection is not necessary but is required the first time the user visits Ripened Raspberries as the PWA components first need to be downloaded in order to work offline. Moreover, computers should have at least 16GB of RAM, a quad-processor with at least 3.0 GHz and 256 GB SSD storage.

Operational feasibility

JavaScript is being used due to the complexity of setting up Python Flask in a web development environment, i.e. the creation of multiple directories and the subsequent and tedious formatting of components like URLs to be recognised by Flask. Though JavaScript is not as syntax-readable as Python, its ability to link to libraries through connections to other JavaScript files (e.g. Cloudflare's SQL library) will allow us to pursue many of our planned features, giving our product high operational feasibility.

Financial feasibility

All the tools recommended for the development of this product are free. However, certain graphics may require sophisticated manipulation in order to meet the professional standard that we have set out for our movie posters, even though the website design itself is relatively simple. Adobe Photoshop will be required and, if none of our group members currently owns a

subscription, will have to be purchased as in 2024, the NSW DoE announced that Adobe would only be free for certain students.

Schedule feasibility

One of our group members has one more academic commitment than the others towards the end of the term, with all of us having an academic commitment to prepare for the day following the submission of our finished PWA. Thus, skilful time management will be required to ensure that all members are meeting the company's ambitious goals in a timely manner. This will require regular check-ins with each other and clear communication to aid the seamless handing over of the GitHub repository.

Recommendations

Examining all available resources from the above feasibility study, Brentam Blockbusters has come to the conclusion that it must carefully plan and research with a focus on its operational and schedule feasibility. Though core to the operation of Ripened Raspberries software, technical and financial feasibility do not pose a significant concern because the operation of the product on a browser ensures that it can be run on essentially all platforms. Since all tools for this project do not cost the company financially and one member of the group is likely to have an Adobe subscription for graphic manipulation via Adobe Photoshop, the financial aspect of the project is not a concern either. However, the operational feasibility of the project is unstable due to lack of experience with complex manipulation of databases with both JavaScript and SQLite. Our projected features combine specific functions from concepts that were once significantly seen as separate in previous projects. While the internet contains a plethora of resources that instructs on how to utilise JavaScript and SQLite for the successful creation of desired solutions, they are often separate and fail to combine web development and object oriented programming into teaching effective PWA functionality. Thus, Artificial Intelligence (AI) may have to be consulted to combine these elements and assist with specific aspects of our project, e.g. combining search bar functionality with database navigation. Moreover, schedule feasibility must be navigated by planning for the strict completion of specific components of the project by certain times. This is to avoid the cycle that often winds for the sake of achieving the ambitious Out-Of-The-Box (OTBT) sector of the project. A plan as rigid as this will help us meet the minimum requirements set both by the client and the company to guarantee timely completion.

Phase 3: Design

Screen Designs

Ripened Raspberries was designed with the intention of using a farm theme to build trust and reliability with the user. This stems from the symbolism of farms which is tied to the sustenance and sustainability of society. Thus, we believe our PWA will create a lasting impression of accuracy and validity when it comes to curating the best entertainment picks for our users. The contrast of the simple design with the production posters (that are intended to be elaborate) creates a modest vibe that can still present elite entertainment.

Phase 4: Development

Data Dictionary

Entity name	Data type	Description	Validation	Scope
Profile	Array	Holds the details of the user if they are logged in, i.e. string for full name, integer for age, integer for points, etc.	Should only be loaded with strings and integers in a specific order.	Global
LoggedIn	Boolean	Holds the status of whether or not the user of the website is currently logged in. If False, any attempt to write a review will redirect the user to the login/sign up page.	Should only be loaded with a True or False value.	Global
Worker	Constant	Holds the web worker for the PWA after it has been created.	Should only be loaded with a Worker object.	Global
Result	Event Listener Data	Stores the data that the event listener looks out for.	Should only be loaded with an Event Listener Data object.	Global
GenreList	Array	The list of all genres hosted on Ripened Raspberries.	Should only be loaded with ProductionInformation arrays.	Specific to Movies/TV Shows page
GenreProductionList	Array	The list of productions selected to go under a specific genre.	Should only be loaded with ProductionInformation arrays.	Specific to Movies/TV Shows page

ProductionInformation	Array	A list containing information about a specific production, including name, year of release, general rating information, etc.	Should only be loaded with strings and integers in a specific order.	Specific to Movies/TV Shows and Reviews page
MonthsSweetestPick	Array	A list containing information about the production selected for "This month's sweetest pick!"	As in ProductionInformation	Specific to Movies/TV Shows page
PickOfTheWeek	Array	A list containing information about the production selected for "Pick of the Week"	As in ProductionInformation	Specific to the website homepage
RatingsList	Array	A list containing arrays corresponding to the ratings categories offered by Ripened Raspberries, e.g. Berry Medley (5 stars), Raspberry Yoghurt (4 stars), Raspberry (3 stars), Rotten Berry (2 stars) and Rotten Tomato (1 star). Each array in this array contains ProductionInformation arrays.	Should only be loaded with RatingProductions arrays.	Specific to Reviews page
RatingProductions	Array	A list containing	Should only be	Specific to

nList		ProductionInformation arrays for all the movies pinned under that rating.	loaded with ProductionInformation arrays.	Reviews page
ProductionInformationWithReviews	Array	As in ProductionInformation, except a list added of all the reviews published for that production.	As in ProductionInformation, except the reviews list is also added (ReviewInformation).	Specific to Reviews page
ReviewInformation	Array	A list containing information about a specific review, i.e. sender, title, time, text, rating, array of replies to that review, etc.	As in ProductionInformation, except the replies list is also added (ReviewReplies) . The review text must also be checked for appropriateness.	Specific to Reviews page
ReviewReplies	Array	A list containing all the replies made to a specific review.	Should only be loaded with ReplyInformation arrays.	Specific to Reviews page
ReplyInformation	Array	A list containing information about a reply made to a review, i.e. sender, text and time.	As in ProductionInformation. The reply text must also be checked for appropriateness.	Specific to Reviews page
ContactText	String	The text that the user enters into the textbox which they can use to contact Ripened Raspberries.	Can be loaded with as much text as needed but must be checked for appropriateness.	Specific to Contact Us page

Code

Partial backend of production filter on Movies & Shows page

```
let query = `
    SELECT Movies.rowid, Movies.Name, Movies.Rating, Movies.AgeRating, Movies.Medium
    FROM Movies
    WHERE 1=1
`;
const params = [];

if (age !== "") {
    query += " AND Movies.AgeRating = ?";
    params.push(age);
}
if (rating !== "") {
    query += " And Movies.Rating = ?";
    params.push(parseInt(rating, 10));
}
if (genre !== "") {
    query += `
        AND EXISTS (
            SELECT 1 FROM MovieGenres
            WHERE MovieGenres.MovieName = Movies.Name
            AND MovieGenres.Genre = ?
        )
    `;
}
```

Our movie filtering mechanism involves appending to a growing query based on an either increasing or decreasing number of attributes that are specified based on user preferences. A separate table is used specifically for production genres to allow one production to have multiple genres and thus diversify movie and show search. Queries on two tables are performed to ensure that entries are picked for a variety of attributes.

Backend of sorting displayed entries on Movies & Shows page

```
if (order === "MOST POPULAR") {
    query += " ORDER BY CAST(Movies.Rating AS INTEGER) DESC, Movies.Name COLLATE NOCASE ASC";
} else if (order === "A-Z") {
    query += " ORDER BY Movies.Name COLLATE NOCASE ASC";
} else if (order === "TOP BOX OFFICE") {
    query += " ORDER BY Movies.BoxOffice COLLATE NOCASE DESC";
} else if (order === "NEWEST") {
    query += " ORDER BY Movies.Year COLLATE NOCASE DESC";
}
```

After the queries are performed on the SQLite database to extract entries most suited to user filter preferences, the resulting entries themselves can be sorted. Ripened Raspberries offers sorting by popularity, box office, alphabetical order and how recent entries are. SQL queries are used to simply sort by the special company popularity index score, amount of money made and the year integer in descending order to respectively display more popular, prosperous and recent movies and shows first.

Partial homepage movie and show card document structure

```
</a>
<a href="/movies/barbie.html" class="movie-card">
  
  <h3>Murder On The Aryan Cruise</h3>
  
</a>
<a href="/movies/oppenheimer.html" class="movie-card">
  
  <h3>Sountharikan: Into The Sounth-Verse</h3>
  
</a>
<a href="/movies/oppenheimer.html" class="movie-card">
  
  <h3>Raffay Potter and the Goblet of Fire</h3>
  
```

To enhance visual representation of movie entries on both the homepage and movies page, a “movie-card” element has been created to contain the poster, title and rating icon of each entry. Each card itself serves as a hyperlink to the page containing reviews on the title. Rounded corners and appearing shadows on hover make the production reviewing experience more compact yet satisfying for the user. Ripened Raspberries prides itself on as simple yet effective design as this.

Phase 5: Testing

Test Cycle 1

Date	15th December 2025
Testing	The login and signup functionality was tested, and repeated attempts were made to login with both the provided dummy account and the created account.
Issues	• Could not switch between login and signup options • Clicking logo on homepage displays 404 error • Username may not be necessary for login—only for signup • We can say the username instead of 'Hi, username' • Logs out when you switch webpages after logging in • Styling for contact page misaligned • Signing up does not function
Action taken	• Logo on on homepage linked back to itself • 'Hi, username' added to every webpage to sustain login through all webpages • Function added for signup, with new accounts saved in local storage

Test Cycle 2

Date	16th December 2025
Testing	All movie cards on the Movies & Shows webpage were clicked to confirm that they all went to their respective production review pages.
Issues	• Links function on a local server but are not found when accessed on GitHub, likely due to programmatic creation of these links • Articles were missing • Review rating icons were sized incorrectly on homepage and review pages
Action taken	• As the links exist on a local server, README update to request running on the local server using python command. • Articles created and linked to correct news homepage links. • Review rating icon image restrictions changed by modifying both inline and external styling.

Phase 6: Maintenance

Themes

Features

A prominent feature of Brentam Blockbuster's PWA Ripened Raspberries was that it allowed the user to filter through a search of several movies and shows using a few dropdown menus. Additionally, it contained a search bar which allowed narrowed entries to appear onscreen as the user typed live. However, the filtering and searching could have been extended to a network of not only more movies and shows, but also news articles and blogs about the movies. This would have largely diversified a slightly narrow filtering range.

Ideas for the future

As primary school children and teenagers are a prominent segment of our target audience, we can include more interactive elements in our PWA to engage with them. Quizzes about popular productions and mini-games based on well-known themes of entertainment may encourage young users to explore the art of critiquing more deeply, prompting critical thinkers for a generation of futuristic entertainers. Thus, a future version of our PWA focusing more on interactivity and creative expression is part of our plan to expand.

Program

Brentam Blockbusters has created Ripened Raspberries to submit to the TAS Faculty of Girraween High School in order to satisfy Software Engineering course requirements. A PWA has been directed by the NSW Department of Education as part of the Programming for the Web unit. Brentam Blockbusters will alternate between the testing and development phases to continually improve and thus maintain Ripened Raspberries by keeping track of issues, particularly with our databases and production filtering schema.

Phase 7: Evaluation

Benson Carungay

Even with the somewhat large scope for the project, I was confident that my past experience with html/css and JavaScript would aid well in the development process. During the initial design phase, I had some disagreements with my group members in regards to contesting screen designs, leading to a slow beginning. There was also an emphasis on planning everything out before actually starting programming which may have been overthought a bit too much. However the initial stages were soon resolved and my role in development was able to carry forward. At first I had assumed this project would require connecting to an online database, but soon realised that this particular assessment wasn't so involved as I imagined. From there I, with the help of my group members, were able to develop the features of the movie reviews website. It was at this stage when the previous planning we had envisioned such as the custom movies and OTBT like the news article section showed through in our efforts. I also had to briefly guide my group members through the file-sharing process of Github, but once they had handled that part of the project succinctly, collaboration in programming the website was able to succeed. This was hindered, however, by unclear communication as to who was responsible for some of the missing features still left to be done during this time, but as a group we managed to clear those up by the time of the assessment deadline.

Nicolas Brentam

This Progressive Web App (PWA) project initially felt daunting, as I had little prior experience with several key elements, particularly JavaScript. As project lead, I attempted to guide the team from the outset, but our early progress was hampered by poor collaboration, limited communication, disagreements, and time constraints. We had planned to complete the pre-development tasks (analysis and design phases) by the end of week 4; however, these challenges delayed completion until week 6, leaving us to begin development much later than intended. This setback significantly reduced the time available for testing and refinement before submission, which I believe negatively impacted the overall quality of the final project. However, as the due date approached, the team began working much more efficiently and collaboratively. All members recognised the importance of delivering a satisfactory final product and contributed to implementing the required functionalities, including registration and authentication, admin authorisation, writing reviews, sorting movies, and our OTBT feature, RipeBerry News. These efforts ensured that the core requirements of the project were met despite the earlier delays.

Raffay Haroon

I initially felt threatened by this task because I possessed no prior experience with JavaScript that would be useful in the creation of a Progressive Web App (PWA) which I had never learnt about before Software Engineering. Despite this, I was optimistic that one of my group members was skilled with JavaScript and enthusiastic about digital design and development. However,

things unfolded against my expectations. We were aiming to complete all of our documentation by the end of Week 4 to prepare for development in Week 6, but not all of our group members remained up to date with our plan. We missed out on crucial time for not only development, but also time to research on PWA development as our experience was limited. My group worked poorly together at the beginning of the task as we did not collectively demonstrate a drive to create a high quality and unique product. Additionally, not all group members were working consistently during lessons, and it was difficult to communicate what was to be done when due to the resistance that had to be dealt with. However, we worked much better together closer to the due date when we clearly understood who was responsible for the satisfactory completion of certain parts of the project in time for submission. Overall, the consequences of working close to the due date could have been more carefully taken into account as it caused unnecessary confusion and stress.
